

* Female Reproductive System

- The human Female reproductive system consists of internal genitalia and external genitalia.
- Internal genitalia includes ovary, oviducts, uterus and Vagina.
- External genitalia is called as vulva OR pudendum.
- There are pairs of vestibular glands in external genitalia.
- Mammary glands are also associated with the Female reproductive system.
- Female reproductive system is situated inside the body.

- Ovaries :- They are solid, oval or almond shaped.
 - 3cm in length and 1.5 cm in breadth and 1cm thick.
 - They are situated in the upper lateral part of the pelvis near the kidneys.
 - Ovaries produce Estrogen, progesterone, relaxin, activin.
 - These hormones are responsible for controlling menstrual cycle, pregnancy and parturition.
- Oviducts :- It is also known as Fallopian tube & uterine tubes.
 - They lie horizontally over the peritoneal cavity.
 - Each tube is 10-12cm in length.
 - It is internally lined by ciliated epithelium.
 - Fallopian tubes carry the released egg from the ovary to the uterus.
 - It is divided into 3 regions:
 - ① Infundibulum.
 - ② Ampulla.
 - ③ Isthmus.
- uterus :- It is also known as womb.
 - It is a hollow, muscular, pear shaped organ.
 - It is located above and behind the urinary bladder.
 - It is 7.5cm long, 5cm broad and 2.5cm thick.
 - uterus provides site for implantation, Gestation, and parturition.
 - It also forms placenta.
 - uterine wall can be distinguished into 3 layers.
 - Those are as follows:

1. perimetrium (outermost layer)

2. Myometrium (Middle layer).

3. Endometrium (Innermost layer).

- The uterus is divided into 3 parts.

① Fundus: It is the upper dome shaped part.

② Body: It is the broad part of the uterus.

③ Cervix: It extends to vagina.

- Vagina: It lies between cervix and the vestibule.
• It is 7-9 cm long in length.
• The opening of vagina into the vestibule is called as vaginal orifice. which is partially covered by hymen.

- Accessory Glands: 1. vestibular gland: They open into the vestibule and release a lubricating fluid.

2. Mammary Gland: For production and release of milk after parturition.
